

Autoresponder Integration - AWeber & WebinarIgnition

Introduction...

In this tutorial we will cover how to integrate AWeber with WebinarIgnition.

It might seem tricky at first, but if you follow the steps then you won't have any problems!

First, sign up / login to AWeber ::

Creating The Form

You will need to create the form inside of Aweber. The design / look and feel of this wont matter.

What is important is the order of the form. In this example, we are just having a name and email. You could have it with the first name and last name. Even adding a phone area in there as well.

To make things easier on yourself. Keep this order::

Name (OR First Name - Last Name)

Email

Phone

That way it will sync up with the AR integration better.

Once you got your form done, hit go to step #2

Form Settings

You can name the form anything you would like.

Important - DO NOT ADD THE FACEBOOK INTEGRATION. This will cause issues with the AR split feature.

For the thank you page - if you are using a LIVE webinar, then you add your thank you page as a URL. Grab your webinar URL and just add ?confirmed to the end of the URL. This will be your thank you page.

If you are using a AUTO webinar. Then you don't need to set a redirect URL as it does it automatically.

Home Messages Subscribers Sign Up Forms Reports List Options

1 **Design**
Customize the look and style of your form.

2 **Settings**
Edit your form's properties and choose a thank you page.

3 **Publish**
Place your form on your site.

Basic Settings

Customize your forms properties.

Form Name*:
My Web Form 6

Facebook Integration:
☐ Enable Facebook registration form.
Form must be at least 300px wide.

Thank You Page:
Basic Version

☐ Open this in a new window

Already Subscribed Page:
Basic Version

Show Advanced Settings

Save Your Form **Go To Step 3**

Getting The Raw HTML Form Code

Once you save the form, you will be presented with a few options. Choose the "I will install my form" and then choose Raw HTML Version.

Copy all this code and paste it into WebinarIgnition (1)

Who Will Publish This Form To Your Website?

```
<!-- AWeber Web Form Generator 3.0 -->
<style type="text/css">
#af-form-849110584 .af-body .af-textWrap{ width:98%;display:block;float:none;}
#af-form-849110584 .af-body .privacyPolicy{ color:#000000;font-size:11px;font-family:Verdana, sans-s
#af-form-849110584 .af-body a{ color:#094C80;text-decoration:underline;font-style:normal;font-weigh
#af-form-849110584 .af-body input.text, #af-form-849110584 .af-body textarea{ background-color:#F
#af-form-849110584 .af-body input.text:focus, #af-form-849110584 .af-body textarea:focus{ backgrou
#af-form-849110584 .af-body label.previewLabel{ display:block;float:none;text-align:left;width:auto;col
#af-form-849110584 .af-body{ padding-bottom:15px;padding-top:15px;background-repeat:no-repeat;ba
#af-form-849110584 .af-footer{ padding-right:15px;padding-left:15px;background-color:#transparent;b
#af-form-849110584 .af-header{ padding-bottom:9px;padding-top:9px;padding-right:10px;padding-left:
#af-form-849110584 .af-quirksMode .bodyText{ padding-top:2px;padding-bottom:2px;}
#af-form-849110584 .af-quirksMode{ padding-right:15px;padding-left:15px;}
#af-form-849110584 .af-standards .af-element{ padding-right:15px;padding-left:15px;}
#af-form-849110584 .bodyText p{ margin:1em 0;}

```

☒ Include beautiful form styles. Uncheck to get unformatted basic form.

My Web Designer Will Install My Form

WebinarIgnition Setup

When you paste in the code, and hit the Split AR Code, the program will take apart the form code and place it in certain fields.

This is not perfect, because your form names could be named anything. So it does the best it can. In this example, since we are only using Name and email. The script placed the "email" field (1) in the wrong section, this can be easily fixed by moving it in the right spot.

This is where the order of the form fields really helps.

If you want ALL the info sent to your AR: First Name, Last Name, Email, and Phone. Then it will match up those fields perfectly below, but since we didn't have a phone, nothing was entered. Since we didn't have a last name, only full name, it added the email in the wrong spot. (but easily fixed.)

Once you got the names matched up, your done!

The screenshot displays the WebinarIgnition setup interface. At the top, there is a section for 'Raw HTML Version Of Your Optin Code' with a text area containing the following code:

```
]]U;  
-->  
</script>  
  
<!-- /AWeber Web Form Generator 3.0 -->
```

Below this is a button labeled 'Split AR Code'. The main section of the interface consists of several rows, each with a label on the left and a text input field on the right:

- AR Post URL**: This is the POST URL for the AR code (should be filled in for you)... The input field contains 'http://www.aweber.com/scripts/addlead.pl'.
- AR First Name Field**: This is the NAME for the first name OR full name field (should be filled in for you)... The input field contains 'name'.
- AR Last Name Field**: This is the NAME for the last name field (should be filled in for you)... The input field contains 'email'. This field is highlighted in yellow and has a red arrow pointing to it from a circle with the number '1'.
- AR Email Field**: This is the NAME for the email address field (should be filled in for you)... The input field contains 'Example: email'. This field has a red arrow pointing to it from a circle with the number '2'.
- AR Phone Field**: This is the NAME for the phone number field (* OPTIONAL)... The input field contains 'Example: phone'.
